(Volume 32)

adaptive testing 4:398
asymptotic variances 1:61
automatic essay scoring 1:6

Bayesian estimation 2:125
Bayesian hierarchical models 3:287
Bonferroni intervals 1:61

characteristic curve method 4:371
cluster-randomized trials 2:151, 4:341
concurrent versus separate calibration 4:371
conditional item-exposure control 4:398
confidence intervals 1:39
correlation 2:180
criterion function 4:371
cross-classified multiple-membership data 2:125

differential item functioning 1:92

educational assessment 3:252
effect size(s) 1:39, 1:92, 4:341
extrabinomial variation 4:419

factor analysis model 3:252

generalized estimating equations 4:419
generalized least squares 2:180
generalized linear mixed model 4:419
group-randomized trials 4:341

hierarchical model 4:419

international comparisons 3:252
intraclass correlations 2:151
item eligibility method 4:398
item response model 3:252
item response theory 3:287, 4:371

Kelley's formula 1:6

Lagrange multiplier tests 1:24
latent regression 3:233
layered model 2:125
local independence 1:24
logistic regression 1:92

Markov Chain Monte Carlo 2:125, 3:252
maximum likelihood 1:110
mean squared error 1:6
meta-analysis 2:180, 4:341
Monte Carlo study 2:180
multilevel experiments 4:341
multilevel model(s) 2:151, 3:252, 4:419

NAEP 3:233
Newton-Raphson 1:110
normalized Pratt measures 1:61

overdispersion 4:419

parameter estimation 1:110

quasi-likelihood 4:419

Rasch models 1:24
rater bias 3:287
